Agentra website: proposed changes

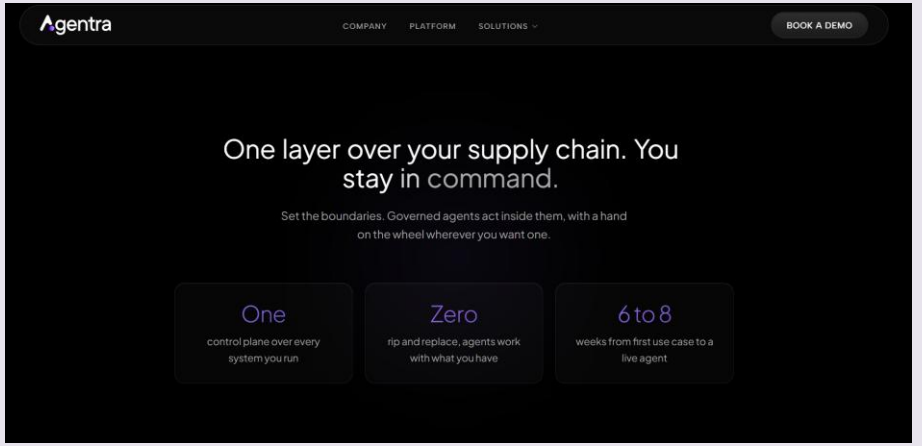

What to change on agentra-ai.com, using Jasper as a reference.

01 · WHERE WE ARE

The homepage explains, then stops

Five sections, then a demo button

Hero, problem, sense-decide-act, stats, demo. Little reason to keep scrolling.

No proof anywhere

No customers, logos, quotes or sourced numbers numbers on the page.

Best material is buried

Real scenarios and numbers sit on Solutions pages most visitors never open.

02 · STRUCTURE

A homepage that holds the reader

Today

- Hero
- Problem statement
- Sense, decide, act
- Stats: One, Zero, 6 to 8
- Book a demo

Proposed

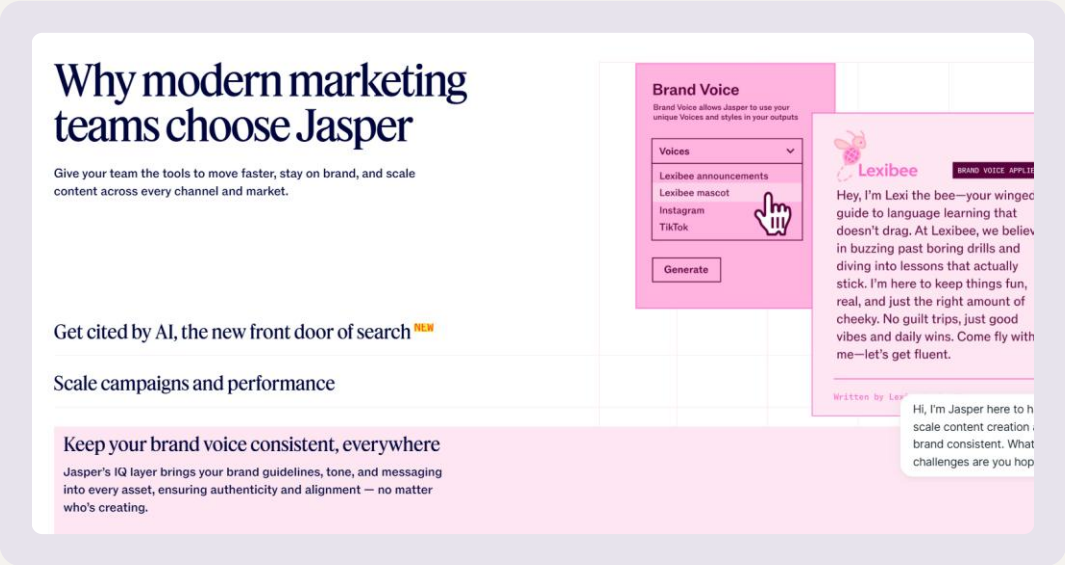

- 1 Hero
- 2 Logo strip: partners, customers
- 3 Problem statement
- 4 Sense, decide, act
- 5 Use-case tabs with scenarios
- 6 Case study or quote
- 7 Stats, now with sources
- 8 Insights and events
- 9 FAQ
- 10 Book a demo, with calendar

Purple = new section. The logo strip is one thin row of logos for instant trust; events get their full section at 8. Jasper's homepage works the same way: it alternates features, proof and resources down one long page, so each scroll gives a new reason to stay.

03 · STRUCTURE

Show real scenarios on the homepage

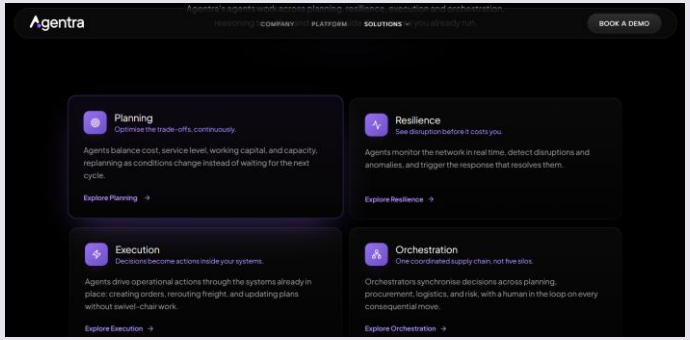

REFERENCE · JASPER

Jasper lists outcomes as expandable rows. Opening one shows the product doing that job, right on the homepage.

PROPOSED · AGENTRA

Bring the four solution cards onto the homepage as tabs. Each tab opens one real scenario from its Solutions page, such as the Tier-1 casting supplier or the Jebel Ali cutoff, with its number.

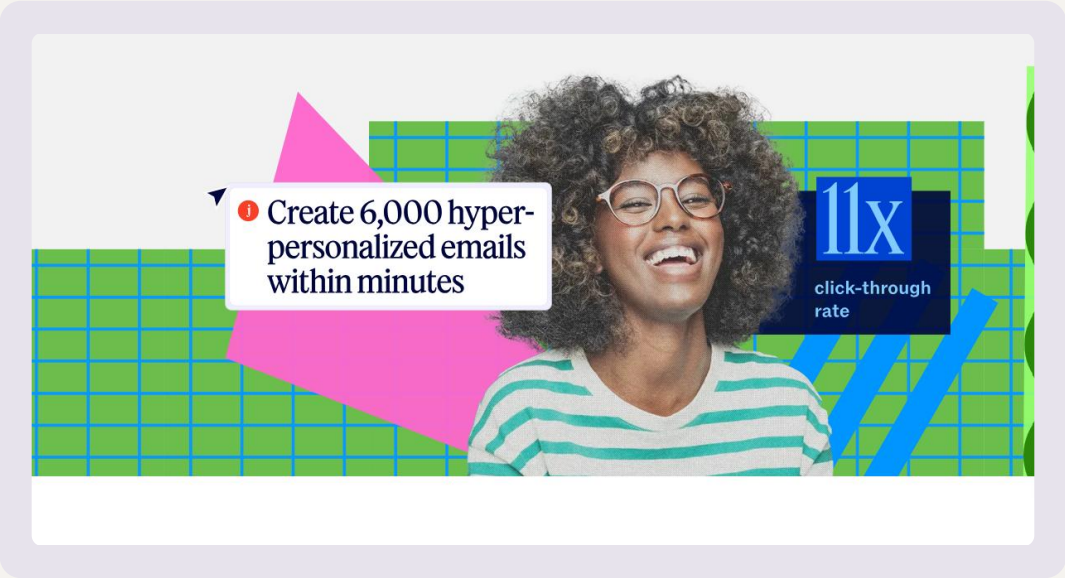

Why it matters: visitors meet a problem they recognise without clicking away.

Effort: Medium. The content already exists; it needs a tab component.

04 · PROOF

Show results, not just features

REFERENCE · JASPER

Jasper shows a result a customer got: 11x more clicks. It proves the product works.

PROPOSED · AGENTRA

Our homepage numbers (One, Zero, 6 to 8) only describe the product. Our Solutions pages already have real results. Bring them to the homepage:

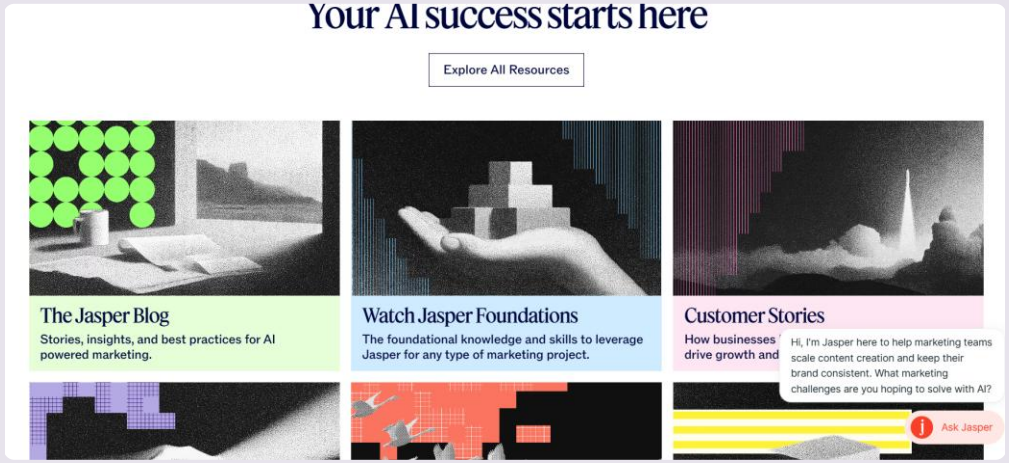

6 hrs → 17 min	time to respond to a supply disruption
30–50%	faster problem resolution
6–8 weeks	to get a first agent live

Add one short line under each saying where it comes from, for example “pilot with a European manufacturer”. Numbers with no source look like marketing.

05 · PROOF

Give LinkedIn somewhere to send people

REFERENCE · JASPER

Jasper's resources section gives each kind of content its own door: blog, training and customer stories.

PROPOSED · AGENTRA

An Insights section with three doors:

Insights

Strong LinkedIn posts turned into short articles, plus Lalit's operator stories

Events

Supply Chain Nexus chapters, TiEcon, Celerity, with photos and a sign-up sign-up

Customer stories

Starts with one anonymised case study (next slide)

Why it matters: posts link back to the site, and Google gets pages to index. **Effort:** Medium.

06 · PROOF

One anonymised case study to start

[EUROPEAN MANUFACTURER · INDUSTRY]

[One-line headline: what changed for them]

The problem	What the agent did	The result
[Disruption they faced]	[Sense, decide, act steps]	**[before → after]**

> “[Quote from their operations lead]”
> [Role], [company type]

Why

Enterprise buyers need to see someone like them before they book a demo.

What we need

Permission to name or anonymise, one before/after number, one quote.

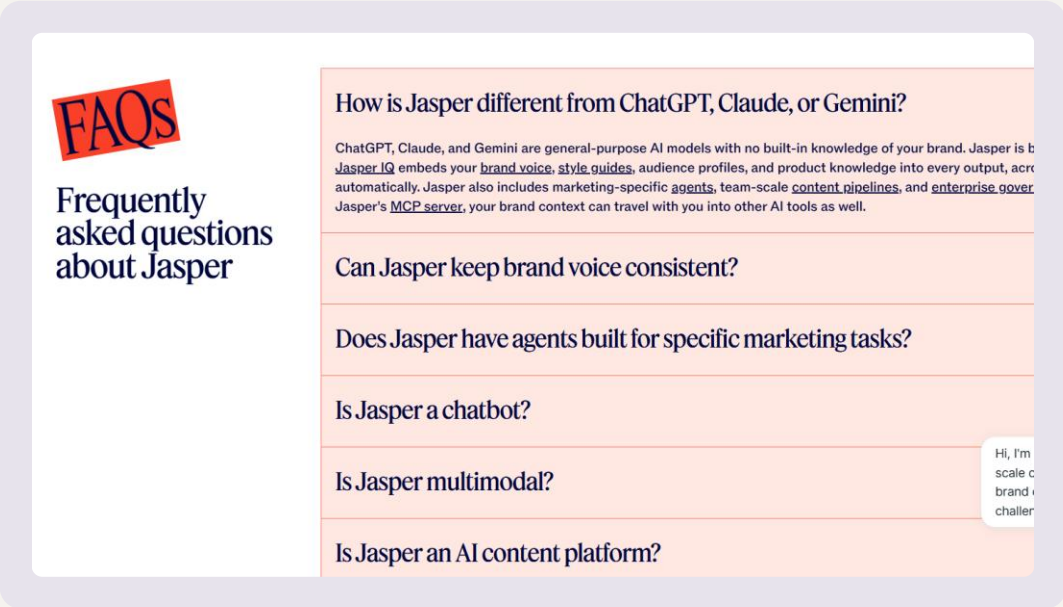

Status

Asking for this now.

07 · CONTENT

An FAQ that answers buyer objections

REFERENCE · JASPER

Jasper's first FAQ tackles the buyer's real doubt head on: why not just use a general AI tool?

PROPOSED · AGENTRA

Draft questions

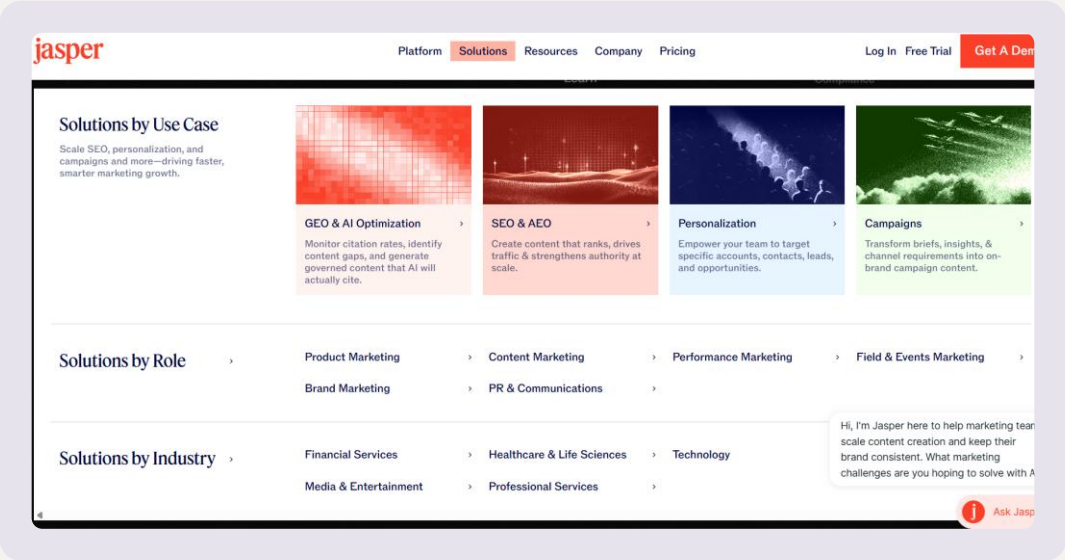

1. How is Agentra different from a dashboard or control tower?
2. Do we have to replace our ERP or planning tools?
3. How do agents stay inside our policies?
4. What does a 6 to 8 week pilot look like?
5. How is our data secured, and where is it hosted?

Why it matters: answers objections before the demo, and AI search tools quote FAQ answers directly. **Effort:** Low. **Needs:** answers checked by product.

08 · NAVIGATION

Solutions by use case, role and industry

REFERENCE · JASPER

Jasper's Solutions menu offers three ways in, so every visitor finds a page written for them.

PROPOSED · AGENTRA

Turn the Solutions dropdown into a menu with three ways in.

By use case

Planning · Resilience · Execution · Orchestration (exists today)

By role

[Planning · Procurement · Logistics · Operations leadership]

By industry

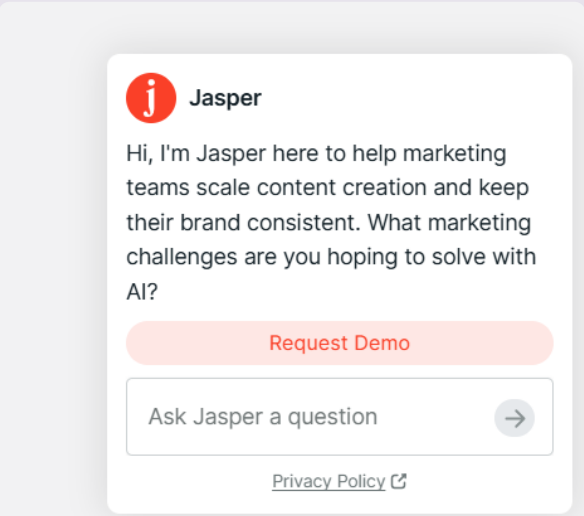

[Manufacturing · Retail · 3PL and 4PL]

Effort: Medium. **Needs:** confirm which roles and industries Agentra targets before writing pages.

09 · NAVIGATION

A narrow website assistant, later

REFERENCE · JASPER

Jasper's assistant opens with one qualifying question and a Request Demo button.

PROPOSED · AGENTRA

An assistant that answers only from the approved FAQ and platform pages, asks the demo form's own question, “What would you like agents to act on first?”, then offers to book a call.

Why later, not first

A wrong answer to an enterprise buyer costs more than no answer. And website traffic isn't measured yet, so we can't judge if it's worth it.

Effort: Medium to high. **Needs:** FAQ live first, plus an analytics baseline.

10 · MOBILE

The mobile site needs its own design

On a phone, the site looks cluttered. It reads like the desktop layout squeezed down, not a page made for mobile. Many people open LinkedIn links on their phone, so this is often where they see us first.
